DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method for reading a non-volatile memory, classified in class 365, subclass 185.02.
- II. Claims 25-31, drawn to a memory system with code enabling reading data, classified in class 714, subclass 38.
- III. Claim 32, drawn to an apparatus, classified in class 365, subclass 185.17.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group III and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the method for reading a non-volatile memory of Group I invention, as claimed, can be practiced with another materially different product, such as other known non-volatile memory capable of overcoming adverse effects of cross-talk between adjacent memory cells.

Inventions of Group II and Group I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite different subject matters. Group II invention recites a

memory system with embedded code for reading data from a multi-state memory cell; while on the other hand, Group I invention recites a method for reading a non-volatile memory cell.

Inventions of Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite different subject matters. Group II invention recites a memory system with embedded code for reading data from a multi-state memory cell; while on the other hand, Group III invention recites an apparatus with means for avoiding read-disturb of a non-volatile memory cell.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
